

SADDLE RING TEMPLATE

I recommend piercing this out of 18-gauge (1mm thick) sheet metal for structural integrity and piercing the saw pierced element out from 20 gauge (0.8mm) thick sheet.

This is designed to be printed on A4 or letter paper - you will need to add or remove length as necessary to get the correct ring size.

The design can be used as-is but it's my hope that you'll get super creative. Think about soldering on other elements, adding extra layers or including a stone setting or five!!

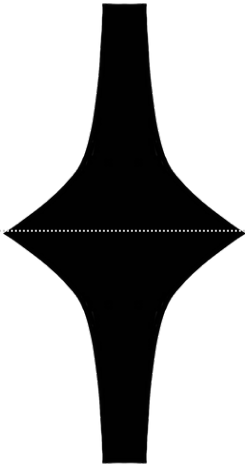

20mm

Size Check!

To ensure you're printing the designs to the intended size, please check this box measures 20mm. However, the designs can be scaled if required.

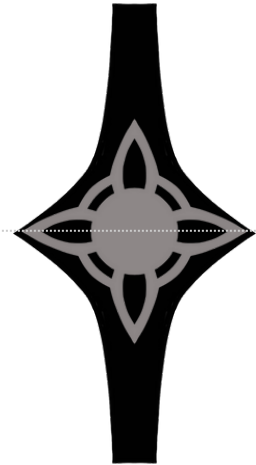

Inner Ring

Soldered Element

Finished Design

Remember to add length to the rings as necessary to get the correct size!
